

In about 100 words, outline at least three ways in which a mobile phone's GPS capabilities can be used to provide benefits to users of a social network.

A mobile phone's GPS capabilities can be used to provide benefits to users of a social network in several ways. Social networking apps can use the GPS data of a user to suggest fun local events, groups, or locations for that user to check out. With the help of their mobile phone's GPS, users of a social network can tag themselves or their pictures, allowing friends and followers to see the various locations they have visited. Also, with users' GPS data social networking apps can help users find local friends and contacts with features like Facebook's people you may know section to expand their contact list.
